

# 57% of healthcare organizations train on email security only once a year

For most healthcare organizations, email security training is an annual event against a daily threat.

## What we found

**57% of healthcare organizations conduct email security training only annually.**

Annual training cannot keep pace with attacks that change weekly. A once-a-year refresher leaves eleven months of drift, right where phishing thrives.

## What it means for buyers

### Frequent training is rare

Only 16% train quarterly or more often.

### Reporting stays low

Only 5% of known phishing attacks are reported by employees.

### Negligence is a top risk

85% of leaders say employee negligence is a top email security risk.

## WHY PAUBOX

# 8,000+

healthcare organizations rely on Paubox for compliant, encrypted email.

### Defense that does not depend on recall

Inbound Email Security catches threats regardless of last training date.

### Fewer decisions for staff

Threats are quarantined before the inbox.

### HITRUST certified

Annual third-party audit of every control.
