

# Email security incidents eat 6 hours of IT time every week

For healthcare IT teams, email security is a standing weekly tax on capacity.

## What we found

**Email-related security incidents consume an average of 6 hours per week of healthcare IT staff time.**

Six hours a week is most of a working day, spent triaging and cleaning up instead of building. The cost is not just breaches. It is the projects that never get done.

## What it means for buyers

### It pulls from other work

40% say managing email security takes time from other critical IT projects.

### It drives burnout

More than 4 in 10 leaders say email security has contributed to IT staff burnout.

### The work never stops

70% report difficulty staying ahead of evolving email threats.

## WHY PAUBOX

# 0

portals. Recipients read secure Paubox email in their normal inbox.

### Less to manage

Inbound and outbound protection in one platform, not a stack of tools.

### Automated protection

Threats are caught and PHI encrypted without manual intervention.

### HITRUST certified

Annual third-party audit of every control.
