

68% of healthcare leaders faced a phishing attack last year

Phishing is not an edge case in healthcare. It is an annual event for most organizations.

What we found

68% of surveyed healthcare leaders reported experiencing a phishing attack in the past year.

Phishing is the most common way into a healthcare inbox, and it is getting harder to spot. Detection cannot rest on employees catching every attempt.

What it means for buyers

-  **Reporting is rare**
Only 5% of known phishing attacks are reported by employees.
-  **Filters miss too much**
65% rely on basic spam filters as their primary defense.
-  **AI raises the stakes**
64% have faced a confirmed or suspected AI-generated email attack.

WHY PAUBOX

8,000+

healthcare organizations rely on Paubox for compliant, encrypted email.

-  **Inbound Email Security**
Flags phishing and impersonation before it reaches the inbox.
-  **Protection that does not wait on staff**
Threats are caught automatically, not left to human reporting.
-  **HITRUST certified**
Annual third-party audit of every control.
