

85% of healthcare organizations had an email breach last year

Email is where healthcare gets breached, and most organizations felt it in the past 12 months.

What we found

85% of healthcare organizations reported at least one email-related breach in the past year.

Email is the most common way PHI leaves a healthcare organization, by accident or by attack. The exposure is nearly universal, and the tools already in place are not closing it.

What it means for buyers

-  **Accidental exposure is common**
60% of healthcare organizations have exposed PHI accidentally over email.
-  **Phishing keeps landing**
68% of healthcare leaders reported a phishing attack in the past year.
-  **The risk is felt, not hypothetical**
55% believe their organization is at moderate to high risk of an email breach.

WHY PAUBOX

0

plaintext sends. Every outbound Paubox email is encrypted by default.

Inbound Email Security

Catches phishing and impersonation that filters miss, before it reaches the inbox.

Encryption by default

Every outbound email is encrypted automatically, closing the accidental-exposure gap.

HITRUST certified

Annual third-party audit of every control.
