

86% say their email security tools create daily friction

Healthcare IT leaders are stuck between security that works and security people will actually use.

What we found

86% of healthcare IT leaders say their existing email security tools create friction in daily workflows.

Portals, plugins, and extra passwords push staff to work around the tools meant to protect them. Security that adds steps is security that gets bypassed, which reopens the exposure it was meant to close.

What it means for buyers

-  **Friction becomes workaround**
Tools that add steps get bypassed, reopening the exposure they were meant to close.
-  **Encryption should be invisible**
78% of leaders name encryption the most important feature in secure email.
-  **It slows the whole team**
Email security incidents already consume about 6 hours of IT staff time each week.

WHY PAUBOX

0

portals. Recipients read secure Paubox email in their normal inbox.

-  **No portals, no plugins**
Recipients read secure email in their normal inbox, with nothing extra to install.
-  **Encryption by default**
Protection happens automatically, so senders change nothing about how they work.
-  **HITRUST certified**
Annual third-party audit of every control.
