

Only 4% of known HIPAA email violations get reported internally

Almost no HIPAA email violations reach the security team, leaving compliance blind.

What we found

Only 4% of known HIPAA email violations are reported by employees to their security teams.

If violations are not reported, they cannot be corrected, and the same mistakes repeat. Compliance built on self-reporting is compliance built on a 4% signal.

What it means for buyers

-  **Phishing goes unreported too**
Only 5% of known phishing attacks are reported by employees.
-  **Training is infrequent**
57% run email security training only once a year.
-  **Negligence is a top risk**
85% of leaders say employee negligence is a top email security risk.

WHY PAUBOX

8,000+

healthcare organizations trust Paubox to secure every email they send and receive.

-  **Compliance built into the send**
Encryption and access controls apply automatically, not by memory.
-  **Audit logging by default**
Every message is logged, so compliance does not depend on self-reporting.
-  **HITRUST certified**
Annual third-party audit of every control.
