

# Only 5% of known phishing attacks get reported by employees

When staff do not report what they see, security teams are blind to most of what reaches the inbox.

## What we found

**Only 5% of known phishing attacks are reported by employees to their security teams.**

Detection depends on reporting, and reporting barely happens. The same silence covers compliance: only 4% of known HIPAA email violations are ever reported internally.

## What it means for buyers

-  **Violations go unreported too**  
Only 4% of known HIPAA email violations are reported to security teams.
-  **Training is too infrequent**  
57% of organizations run email security training only once a year.
-  **Frequent training is rare**  
Only 16% of organizations train quarterly or more often.

## WHY PAUBOX

# 8,000+

healthcare organizations trust Paubox to secure every email they send and receive.

-  **Stop threats before the click**  
Inbound Email Security flags phishing automatically, so protection does not wait on a report.
-  **Fewer decisions for staff**  
Threats are quarantined before the inbox, reducing what employees must catch.
-  **HITRUST certified**  
Annual third-party audit of every control.
