

The top email security challenges healthcare IT leaders name

Phishing and HIPAA compliance dominate the list of email security headaches.

What we found

Leaders rank phishing attacks (38%) and ensuring HIPAA compliance (28%) as their top email security challenges.

The top two challenges are connected. Phishing is how PHI gets exposed, and HIPAA is what makes that exposure a reportable breach. Training gaps and outdated tech make both worse.

What it means for buyers

-  **Phishing leads the list**
38% name phishing attacks their top email security challenge.
-  **Compliance is close behind**
28% cite ensuring HIPAA compliance as a top challenge.
-  **Training gaps compound it**
14% point to lack of staff awareness and training.

WHY PAUBOX

#1

on G2 for email encryption in healthcare, rated by verified users.

-  **Inbound Email Security**
Targets the phishing that tops the challenge list.
-  **HIPAA compliant by design**
Encryption and audit logging keep PHI protected and provable.
-  **HITRUST certified**
Annual third-party audit of every control.
